

## Physical Maze/Arena Repair

1. Assess what needs to be fixed. Most commonly, the wall base pillars will come unglued.
2. Grab materials from the lab: gorilla glue, spare piece(s), printer paper, textbooks from lab (use cart to take to the vivarium).

(a) paper (b) textbooks and gorilla glue (c) spare maze/arena parts

*After taking materials to vivarium, you can begin maze repair*

3. Take walls off and set aside.
4. Lay paper underneath the area to be repaired so glue doesn't get stuck to the floor.
5. Glue pieces together, place textbooks, and wait about three hours until glue dries.

6. Clean the workspace and put the arena back together.
